

SWAN-CANNING

RIVER RECOVERY

FREE SCHOOL VISITS

Perth NRM is a not for profit environmental management organisation. Funded by the Australian Government, we can visit both primary and secondary schools to educate students on the Swan-Canning River Recovery Project. Our environmental scientist will help your students understand the river system and how we can lessen our impact on the riparian environment. The classes go for 45 minutes and are tailored to be suitable for Years 3-6 and Years 7-12.

CLASS TOPICS

Life In The Catchment

Our actions at school and at home can affect the river ecosystem. Students will learn about some of the species living in the river and how we can lessen some of our impacts on their habitat.

Caring For The Catchment

Our rivers provide the community with ecosystem services including food, recreation, urban cooling, and many more. Students will learn about some of these services and how we can help to improve them.

Future Of Our Rivers

Our rivers are constantly changing but remain integral to our community and local identity. Students will learn how our rivers can change over time and envision the type of river they want for the future.
